PDUX4B-AS Datasheet

The PDUX4B-AS is a high-performance solid-state power distribution unit with a total of 48 powered output channels and maximum current capacity of 350A.

This includes ten flexible 25A output drivers with soft start (half-bridge, high side or high side PWM at a configurable frequency); two 25A capable output drivers with soft start (high side and high side PWM at a configurable frequency) and seven 25A capable output drivers (high side).

In addition, there are nine 15A output drivers with soft start (high side or high side PWM at a configurable frequency) and twenty 15A output drivers (high side).

Using digitised, voltage, or linearised values from its 16 analogue inputs and from any of three CAN buses, the PDUX4B-AS is calibrated using a clear graphical interface with full logic simulation and live monitoring capabilities.

The PDUX4B-AS is able to operate in a low-power standby state, drawing <2mA, with configurable activation based on physical or CAN input.

Additionally, the PDUX4B-AS may be used to expand input and output functionality of any Life Racing ECU.

13/06/2024 v1.4

Features:

- Schematic based calibration including logic simulation tool.
- Custom CAN across 3 buses including mux frames and retransmission (gateway) features, configured with a graphical display and import/export tool.
- Low power state woken on either a physical input, CAN activity or specific CAN frame
- Configurable evaluation frequency operation of schematic components in circuitry "Expert Frequency Mode"
- Optional internal IMU (Inertial Measurement Unit) feature offers a six-axis gyro and accelerometer which can be processed internally or transmitted over CAN.

Outputs:

- 48 main power outputs:
 - 10 multifunction outputs configurable as either half-bridge, high side, low side, high side PWM (100Hz-20kHz) outputs.
 - (25A continuous, soft-start inrush limiting 60A, hard-start inrush 60A)
 - 9 high side, two of which can be high side PWM (100Hz-20kHz) outputs. (25A continuous, hard-start inrush 60A)
 - 29 high side, nine of which can be high side PWM (100Hz-20kHz) outputs. (15A continuous, hard-start inrush 30A)
- Output linking ('teaming') to support very high current devices.
- Four additional low side outputs with configurable PWM (10Hz-10kHz, 5A maximum).
- All outputs short circuit and thermally protected with multi-stage in-rush control.
- All outputs additionally protected by physical fuses as required by worldwide regulations.
- Combined diagnostic output with reset input.
- 128 scalable CAN ('soft') outputs.
- Custom CAN datastream— i.e., customisable channel current, channel state and device information

Inputs:

- 16 physical 0-5V inputs, including software selectable 3k Ohm pull-up resistors.
- Four inputs capable of programmable "wake" functionality.
- Comparing and manipulating real numbers (floating point decimal) in schematic using configurable logic blocks.
- Analogue inputs can be linearised, viewed as raw voltage or Boolean values.
- Dedicated wake pin.
- 128 CAN 'soft' inputs with configurable scaling.

Interfaces:

- 2x 100Mbit/s full duplex Ethernet (Ethernet switch functionality).
- 3x CAN 2.0B fully flexible.
- Option for one galvanically isolated CAN bus (CAN3 custom projects only).
- RS232C serial interface (custom projects only).
- LIN Bus (custom projects only).

Power Supply:

- 6V to 20V input voltage (12V).
- Dedicated logic power input.
- Regulated 5V sensor supply output with full circuit protection.

Sleep State:

- Low power standby state with configurable wake options:
 - Wake by voltage signal (1.6mA).
 - Wake by any CAN activity (CAN-1 only) (2mA).
 - Wake by specific CAN frame or content (two frames required, CAN-1 only) (2mA).
 - Wake by specific CAN frame or content with low latency (one frame required, CAN-1 only) (10mA).

ECU Slaving:

- Allows a Life Racing ECU to "claim" unused pins across a dedicated CAN bus utilising the following PDU I/O:
 - Outputs 1-10 with additional functionality including full-bridge pairing and configurable PWM frequencies.
 - Low outputs 11-14 with configurable PWM frequencies and internal pull up resistors.
 - All 16 inputs, including eight frequency capable (four optionally bipolar), and all with software selectable 3k Ohm pull-up resistors.

Physical:

- Three Autosport connectors with a total of 122 pins.
- Amphenol SurLok power stud.
- Machined Aluminium enclosure.
- 210x130x52mm
- 1090 grams.
- Operating Temperature -40°C to +85°C.
- M4 mounting threads.

Ordering Information:

Description	Part number
PDUX3B-AS 350A (10mm main power stud)	PDU-H01
PDUX3B-AS 200A (8mm main power stud)	PDU-H04
PDUX4B-AS 350A (10mm main power stud)	PDU-H02
PDUX4B-AS 200A (8mm main power stud)	PDU-H05
PDUX 350A Connector Kit	CON-A18
PDUX 200A Connector Kit	CON-A17
3-axis accelerometer and 3-axis gyroscope	PDU-FEAT-IMU
Two pin wheel speed sensor inputs	PDU-BTC-WS

Footnotes:

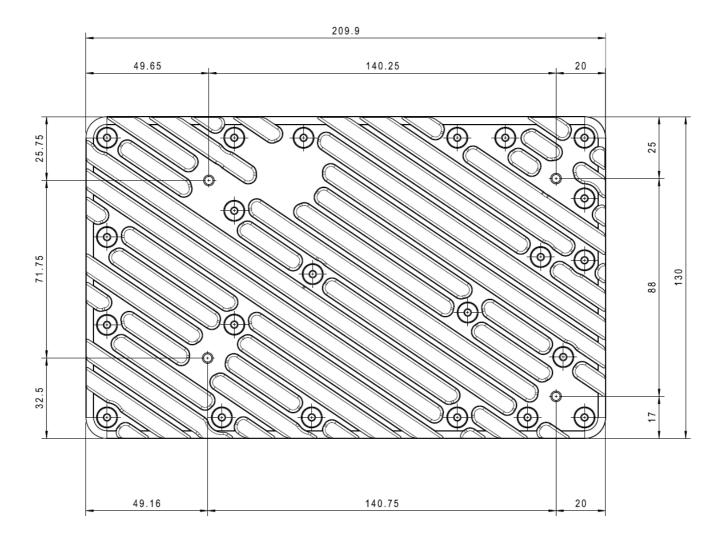

⁽¹⁾Default PWM frequency for Outputs 1-12 is 20kHz.
(2)Default PWM frequency for Outputs 21-28 is 20kHz.
(3)Default PWM frequency for Low Side Outputs 11-14 is 125Hz.

 $[\]ensuremath{^{(4)}\text{Can}}$ be calibrated to bring unit out of sleep mode.

Dimensions:

Warranty and Servicing:

• One-year limited warranty when used within supplied specification.
